EBU6304 – Software Engineering Group Project

Progress check 1 (18/19 April 2023)

1. Time and room

The progress check will take place at the EBU6304 tutorial slot, as below. All group members must be present *.

Students	Time	Room
Telecom classes 1-5	Wednesday 19th April 18:30-19:15	3-535
IoT	Wednesday 19th April 16:35-17:20	3-437
Telecom classes 6-10	Tuesday 18th April 08:00-09:35	3-535
e-Commerce	Wednesday 19th April 18:30-19:15	3-435

*If all group members are not available at the same time due to timetable clash with lectures (Telecom students only as their groups might be mixed from classes), the group may arrange another time with the teaching assistant during Wednesday 19th April afternoon, however the group needs to find a suitable place to meet the TA.

The TAs will contact group leaders to confirm the time/room.

2. Preparation

The progress check will focus on the product backlog and prototype.

Please prepare and bring your laptop with:
- Product backlog
- Full Prototype
- UML diagrams (optional)
- Latest WORKING Java programs (optional)

3. The procedure

Please meet your group TA and show the product backlog and prototype and receive feedback from the TA. The group may (optionally) show UML diagrams and Java programs.

The group will be asked questions about the user stories, prototype, project management, project plan and individual contributions so far.

4. Checking result

There is NO mark directly for this progress check. However, it will be part of the Project Management marking criteria at the final marking. Groups must show satisfactory progress to date.

The TAs will report any student that:
- Absent from the progress checking
- No contribution or little contribution to the group work so far
